

Modul

VEX4000-NRC

VEX4000 - INTEGRERET LYDDÆMPER

The integrated acoustic damper module offers great flexibility with many placement options in the unit. The acoustic baffles can be easily removed and cleaned.

PRODUCT BENEFITS

- Calculation of acoustic together with Unit in EXselectPRO
- Easy to remove sound baffles and clean
- Materials certified according to VDI 6022
- Minimal pressure drop
- Many placement options

Principles of operation

The integrated acoustic damper is a module for the VEX4000. The acoustic damper is available in several lengths, allowing noise reduction and pressure loss to be optimised.

Depending on how the integrated acoustic damper section is configured (length and number of baffles), significant noise reduction can be achieved. The precise noise reduction, which is included in the overall sound picture, is calculated using the product selection program.

The integrated acoustic damper section offers many placement options, thereby meeting the requirements of RLT01 and VDI 6022.

Product description

The integrated sound attenuator is a module for VEX4000. The acoustic attenuator is available in several lengths, allowing sound attenuation and pressure loss to be optimized.

It is possible to position the acoustic module so that it meets the requirements of RLT01 and VDI 6022. All materials are VDI 6022 approved. The acoustic baffles can easily be removed from the module and cleaned.

Fields of application

Multi-occupancy residential housing, New, Refurbishment, Non-residential buildings, Schools

Installation
